

Are you in the zone?

Protect Our Waters and Our Health

The Fermi 2 Nuclear Reactor sits on the shores of Lake Erie and puts our health and our Great Lakes (20% of the world's freshwater) at serious risk. It is the same fatally flawed Mark 1 design as the Fukushima reactor that melted down in Japan.

If you are reading this, you are likely in the 50-mile evacuation zone*.
These issues affect you, your family, your community, and your earth.

*The US government urged its citizens to leave the 50-mile radius surrounding the Fukushima reactor following their nuclear meltdown.

Citizen's Resistance At Fermi Two (CRAFT) is an Indigenous-led, grassroots, organization, committed to an accessible, fair, and just energy future for all! CRAFT originally formed after the Christmas Day 1993 incident at the Fermi2 nuclear reactor that dumped 1.5 million gallons of untreated toxic, radioactive water into Lake Erie. We will continue to push for the closing of Fermi2, and for a safer world powered by renewables.
