

# Are you in the zone?

**If you are reading this, you are likely in the 50-mile evacuation zone\*. These issues affect you, your family, your community, and your earth.**

\*The US government urged its citizens to leave the 50-mile radius surrounding the Fukushima reactor following their nuclear meltdown.

# Protect Our Waters and Our Health

Nuclear energy is not a safe or clean energy option. Fermi 2 is a faulty and dangerous Nuclear Reactor that sits on the shore of Lake Erie and puts our health and our Great Lakes (20% of the world's freshwater) at serious risk. It is the same reactor design and model that had a major meltdown in Fukushima, Japan.

The Fermi 2 Nuclear Reactor:

- Discharges 45 million gallons of treated wastewater into Lake Erie daily!
- Dramatically increases cancer rates in the surrounding population (see [radiation.org](http://radiation.org))
- Charges taxpayers to store waste that will take thousands of years to become safe.

If you are reading this, you are in the 50-mile evacuation zone and these issues directly affect you, your family, your community, and your earth.
